

HOUSEPLANTS

The following plants have a trailing or climbing habit and are great choices for hanging baskets.

- Philodendron - Pothos**
- Spider Plant - Goldfish Vine**
- Lipstick Vine - Hoya - Baby Tears**
- White Butterfly - Boston Fern**
- Wandering Tradescantia - Plumbago**
- Tahitian Bridal Veil - English Ivy**
- Grape/Oak Leaf Ivy—Montgomery Ivy**

All plants remove pollutants from the air we breathe. Certain plants do this more efficiently than others. Use the plants below to improve the air quality in your home and office!

- Pothos - Philodendron**
- Spider Plant - Chinese Evergreen**
- Dracaenas - Corn Plant - Yucca Cane**
- Peace Lily - Snake Plant**

SEASONAL PLANTS

The following plants are available seasonally or periodically. Most are part of our spring offering in April & May.

- Bougainvillea - Mandevilla**
- Passion Flower - Stephanotis**
- Jasmine - Edible Figs**
- Hibiscus - Gardenia - Clivia**

FERTILIZER

Most plants appreciate monthly feedings. Foliage Plants: use **all purpose** formula. Flowering Plants: use **flowering** formula.

WINTER TIPS

When our days become shorter and less sunlight is available, leaves may drop. Plants do not grow as much during the winter months and do not use as much water or fertilizer. Please adjust your watering schedule accordingly.

REPOTTING

Repot your plants only when root-bound. Too large a pot can cause root rot due to excess soil that cannot dry out fast enough. When repotting, choose a pot with good drainage that is only one size larger than the plant's previous pot.

GROOMING & PRUNING

Just like people need haircuts, plants need pruning to keep looking good. Trim your plants as necessary to keep them lush and healthy. Please consult your plant tags for care instructions specific to your variety.

OPEN YEAR ROUND!

LIGHT

Know the light needs of your plants. Insufficient light can lead to dropping leaves and leggy growth. Excess light can cause leaves to burn.

Low Light - Minimal indirect light 
for short periods daily or room interiors.

Medium Light - Bright indirect light. 
Diffused light from a nearby window.

High Light - Sunny direct light 
for at least three hours per day.

WATER

Generally, the best way to water is to pour water onto the surface of the soil until water runs out the pot's drainage holes. Drain excess water away within 10 mins. Do not use machine softened water.

Moist - Keep soil evenly moist. 
Do not let dry out completely.

Moderate - Allow the soil to dry slightly, 
then water well.

Dry - Allow the soil to dry well. 
Be careful not to overwater.

TEMPERATURE

Most plants thrive in average household temperatures. Drafts or large fluctuations in temperature can be troublesome.

Plant Name	Light	Water
Alocasia		
Aloe Vera		
Aluminum Plant
